

Cub Manufacturing News 8/19/2016

Welcome back to another week of Cub Manufacturing!

Using our new measuring tools:

This week we have been learning how to use the dial caliper and tape measure. Students have been working with the tape measure, learning to measure from an inch to the sixteenth. We are learning to use the dial caliper and realizing how precise the measurements have to be.

Student teaches teacher:

We have had a visitor in the shop this week. Trevor, a student at MCHS but not in our class, has been working with Mr. Lamb to teach him how to TIG weld. Trevor has a wider range of experience in TIG welding than Mr. Lamb does and the students have no experience, so the teacher also became one of the students this week. A prime example that we all must be lifelong learners and can learn from one another!

Plasma Cutter Update:

We have worked together to try and determine the cause of the malfunction. We now have a better understanding of what it must be like when equipment is down on the shop floor. It is frustrating for us, especially Mr. Lamb, to try and teach when your equipment is down. We also see the impact on production.

Hands-on with TIG welding.
